

Newsletter 197 Health Minister, Greg Hunt, and Censorship of the Vaccination Debate in Australia

20 April 2018

The Health Minister, Greg Hunt, claimed yesterday on ABC radio that he believes in <u>freedom of speech</u> yet he is currently attempting to shut down the public debate on vaccination. Our right to choose how many vaccines we use in our bodies is being removed in Australia yet there is no discussion of this issue in the mainstream Australian media.

In November 2017 the <u>City of Sydney Council</u> stated that it would not allow my *university research* on vaccination to be presented or advertised in council venues. This is despite the fact that the <u>University of Wollongong</u> stands by this research.

Traditionally, it is academic debate of university research that forms the basis of government public health policy, but not any more. Australia's Health Minister, **Greg Hunt**, has stated he will shut down social media sites that are presenting the risks of vaccines because he has defined this as 'anti-vaccination'.

Instead of describing this as a debate of the medical risks and benefits of vaccination, we have a **health** minister who is dismissing the risks as 'anti-vaccination'.

This is harmful to the Australian population because Greg Hunt is preventing the science from being scrutinised by the Australian public. This is particularly concerning because vaccines are drugs for healthy people and they cannot be guaranteed 'safe' in any genetically diverse population.

Hence Australia's mandatory and coercive vaccination policies implemented in social welfare legislation represent a <u>crime under the Nuremberg Code</u>. This is the reason why Sweden and Colombia have stated *they will not adopt these policies*.

Greg Hunt, and Richard Di Natale (the Greens Leader) are being informed on this issue by 18/03/2021

powerful lobby groups (<u>SAVN / Australian Skeptics Inc / Friends of Science in Medicine</u>) who are providing false information about the safety and efficacy of vaccines based on corporate-sponsored research that is published in corporate-sponsored journals and presented to the public by a corporate-sponsored media.

I described this situation in <u>Chapter 6 of my PhD thesis</u> in 2015 and now in 2018 here is an article in the Daily Mail titled '<u>Top Medical Journals accused of Skewing Research by raking in Millions of Dollars in 'Bribes' from Drug Firms' (13 April 2018)</u>

In the 1950's doctors were using flawed 'tobacco science' to promote cigarettes to the public as 'safe' and this was finally exposed as 'pseudo-science'. This same science is now being used to promote vaccines and this is why Australian public health authorities <u>will not debate this science</u>.

Our health ministers are working hard to censor this debate because the science that is being used to support government legislation will not stand up to scrutiny - it is 'tobacco science'.

Bachelor of Science, University of NSW

Diploma of Education (Science), University of Wollongong

Master of Science (Population Health), Faculty of Health Sciences, University of Wollongong.

PhD in The Science and Politics of the Australian Government's Vaccination Program, UOW

School of Humanities and Social Inquiry.

Some of the Ingredients in Vaccines:

Please consider whether you want these substances injected into the tissues of your new born infant before the blood brain barrier is developed at 6 months of age or their other body systems. These ingredients and more are present in vaccines and the vaccination schedule has expanded to 16 vaccines requiring 52 doses from birth to adolescence.

And the 'new norm' - allergies, anaphylaxis, Chronic Fatigue Syndrome (CFS), autoimmune disorders (diabetes, childhood rheumatoid arthritis, arthritis, multiple schlerosis etc.) autism, speech delay,

Supporting Public Interest Research

I would like to thank everyone who has supported my research and newsletters over the last 5-10 years. If you have appreciated this unfunded research and debate of children's health I hope you will consider a \$5 donation for the upkeep of my website and continuation of my voluntary newsletters.

Only funded research is promoted to the public and universities do not promote student research. Hence the need for my website and newsletters to promote my independent research that is in the public interest.

neurological disorders, ADHD, childhood cancers.

My website <u>Vaccination Decisions</u> became necessary because the University of Wollongong <u>is not required to rectify the academic record when organised industry-lobby groups</u> provide false information about my university research in the mainstream media.
