

To the Member for Churchlands, WA
Sean L'Estrange

5 March 2017

Dear Mr. L'Estrange,

I am writing to you regarding the community concerns about the new WA **No jab No Play** policies that are being drafted. I am an academic who has studied this area of public health in-depth and there are serious issues for politicians who design legislation that enforces a medical intervention into policies in exchange for essential community services.

Currently the government has not provided the community with evidence that it is necessary to introduce this policy or even if it will be protective of public health in the community. This is because vaccines cause serious adverse events in many people.

I have attached to this email the five questions that the government needs to provide answers for **before** this discriminatory policy is implemented. It is also important that the question of liability for harm is established before this policy is considered.

I am wondering if I could please meet with you to discuss these five questions as I live in your electorate and the evidence for this policy needs to be objective and conclusive before a medical intervention is enforced in government legislation.

Please let me know when would be the best time for me to meet with you.

Kind regards,
Judy Wilyman PhD

The Five Questions the Government has not answered:

The US has paid out over \$4 billion in compensation to vaccine injured victims and this is believed to be only 1-10% of the actual number of people seriously harmed or killed by vaccines.

The government must provide evidence for the following questions or take liability for the harm this policy will cause if they do not provide this evidence to support mandating a medical intervention into government policies:

Five Questions:

- 1) What are the statistics for the number of **vaccinated** and **unvaccinated** children in WA per year:
 - i) getting each of these 16 diseases and dying of these 16 diseases?
 - ii) Is this presented in a public register? If not, why not?
- 2) Which communities have used these 16 vaccines with a **95% uptake-rate** to control these diseases?
- 3) What statistics can you provide that show that the **overall health** of WA children (chronic illness and other diseases) has improved since 1990 when the vaccination program expanded with financial measures?

4) i) Are WA politicians and doctors informed of the ingredients of the 16 vaccines and the serious adverse-events that the pharmaceutical companies have **associated with** vaccines for six decades? (coincidence is not an evidence-based response)

ii) Do WA politicians and doctors provide this information to the public and patients in a transparent manner before they recommend vaccines to the community?

5) i) What **percentage of WA children** will **die or be harmed by** this policy because of the known side-effects of the chemicals in the vaccine and the hidden effects that occur in individuals due to their genetic make-up?

ii) What AE's have you included in this risk assessment and how did you arrive at this risk assessment?

Politicians who implement this medical intervention in the NJNPlay legislation without providing objective evidence for the questions raised above will be held liable for any harm that is caused to individuals on whom these policies are enforced.

The current directive for fully informed consent to vaccination as stated in the *Australian Immunisation Handbook (Ed 10)* is being **breached** by WA politicians if they implement **No Jab No Play** policies without providing the public with the evidence above.

Premier **Mark McGowan**, Minister **Roger Cook**, Minister **Sue Ellery** and Minister **Simone McGurk** are endorsing the safety of combining sixteen vaccines in an infant's undeveloped body in this legislation and the community will hold them liable for any harm that is caused by this legislation if they have not provided the evidence that has been requested in this document.
