

## Newsletter 168 Censorship and Indoctrination on Vaccination in Australia

11 August 2017

The US Vaxxed team has just completed a successful tour of the east coast of Australia, the UK and New Zealand with sell out crowds to concerned parents. This is a film about the MMR vaccine and children's health. In particular, the scientific evidence that has been manipulated by the US CDC researchers to hide the causal link between vaccines and autism.

During the tour of Vaxxed over the last two weeks the venues for these screenings had to be kept secret to prevent lobby groups from targeting the venues to shut down the screening. The exact venue could not be revealed until two hours before the film started. This is not because it is a "secret" film as the Australian media suggested but because industry associated lobby groups are trying to censor this film.

The censorship was extended to the producer of the film, Polly Tommey, as she left Australia. Polly is a parent of a vaccine-damaged child who is concerned about children's health and yet she was [detained and searched](#) because she had toured Australia and questioned the safety of vaccines in our "free" country.

In case you are not aware, vaccines contain aluminium adjuvants, formaldehyde, antibiotics, thimerosal (mercury compound in multi-dose vials) and many other ingredients including polysorbate 80. Here is the information on [polysorbate 80](#) and note that it states that it is a known cause of infertility in animals. Parents are required to be informed of these ingredients before giving their consent to this practice.

In Australia vaccines are considered a 'non-core' health issue and they are promoted to the public in the media by corporations. This is described as the 'corporate model of health' and it is described in my [PhD thesis](#).

This is not an anti-vaccination film (as the media is telling you) but a film that examines the

18/03/2021

scientific evidence to see if claims of safety and efficacy can be verified. The science must be transparent and parents should not be excluded from this debate. Similarly, my PhD thesis is not an 'anti-vaccination' thesis as the media has labelled it. This is about debating the science that exists to claim that vaccines are 'safe and effective'.

It is also about the public's right to choose how many vaccines we use because public health is not just about infectious diseases. The prevention of autism and other escalating chronic illness in children is equally as important and this needs to be weighed against the number of vaccines that we use.

Ignoring the correlation between the ever-expanding vaccination schedule and the deterioration of children's health (escalating morbidity) is demonstrating that the focus of government vaccination policies is not public health. There are many vested interests in this policy and government representatives have financial conflicts of interest with industry and a revolving door with pharmaceutical advisory boards.

Please take an active interest in your children's health because the WA premier Mark McGowan, is currently acting to sign WA up to the federal [No Jab No Play policy](#) (so far without public debate) that will remove your right to choose how many vaccines you use in your children if you need to use childcare/preschool facilities.

Perth will be holding a public screening of Vaxxed in the northern suburbs of Perth on Friday 25 August at 7 pm. This will include a Q and A session with professionals and parents on the panel. Here is the link for tickets and further information for the Vaxxed screening - [Perth Vaxxed Screening](#).
