

Newsletter 176 Australia: Moving towards a Medical Police State (Part 2)

2 October 2017

It is time for all Australians to get involved in the vaccination debate as mandatory vaccination is now being forced on many adults in employment situations. The government has also implemented the **Adult Immunisation Register** to monitor and enforce adult compliance with the recommended schedule of 16 plus vaccines.

In Perth a 1 year old healthy boy died on 10 July 2017 three hours after receiving 6 vaccines but this incident was not reported in the mainstream media. Many others have died or are seriously injured after vaccines but they are also not reported in the corporate-sponsored mainstream media or documented by our 100% corporate-funded government regulator the **Therapeutic Goods Administrator (TGA)**.

Here is a 20 min video clip showing the [global media blackout of public rallies](#) against mandatory vaccines in many countries. It also provides excerpts from the speeches given at the Sydney **No Jab No Play Protest Rally** held 12 September 2017 in Martin Place.

The Australian government is currently putting up a [2.6 metre high fence](#) around parliament house in a \$126 million security upgrade and this is two years after independent MP Andrew Wilkie warned in the Australian parliament that Australia was in danger of becoming a police state. In this video clip of his [speech in parliament](#) he says that there are 10 characteristics of a police state that were implemented in Australia by 2015.

This speech was given around the same time that the Murdoch dominated Australian media promoted the **No Jab No Pay** social welfare policy that bribed parents to use all 16 vaccines that are recommended by the corporate-dominated GAVI alliance to all World Health Organisation (WHO) member countries.

In other words, the governments of WHO member countries no longer design public health policy based on *objective science* with respect to their own country's specific environmental and lifestyle

needs. This is a travesty for public health because it is well established that these social determinants of disease were responsible for the decline in infectious disease deaths in the mid-twentieth century - [before mass vaccination campaigns were introduced](#).

And when mass vaccination campaigns were introduced after 1950 they were always **voluntary** - right up until 2015 when Australia introduced the **No Jab No Pay** policy without any [justification by health ministers, public health authorities or medical doctors](#).

Here is a link to [Newsletter 175 Australia: Moving towards a Medical Police State \(Part 1\)](#) that shows how Australian universities are permitting industry-associated lobby groups and non-expert academics to promote false information about vaccines to the public.

Yours Sincerely,

Dr. Judy Wilyman

Bachelor of Science, University of NSW

Diploma of Education (Science), University of Wollongong

Master of Science (Population Health), Faculty of Health Sciences, University of Wollongong.

PhD in [The Science and Politics of the Australian Government's Vaccination Program](#), UOW

School of Social Science, Media and Communication (re-named the School of Humanities and Social Inquiry in 2014).
