

Newsletter 198 The Censorship of the Vaccination Debate in Australia

14 May 2018

On the 27 April 2018 a seminar was held in Sydney to discuss the [Censorship of the Vaccination Debate](#) in Australia. At this seminar Emeritis Professor Brian Martin, from the University of Wollongong, spoke about the loss of freedom of speech in Australia on vaccination and I spoke about the reasons why this has become necessary on this scientific issue. My presentation starts are 45.30 mins into the video.

This censorship involves:

1. Councils preventing university research that discusses the public interest in vaccination policies from being presented in council venues.
2. Australian journalists misrepresenting university research on vaccination to the public - whilst the University of Wollongong (that is in partnership with industry) remains silent.
3. Powerful industry lobby groups targeting owners of public venues with the loss of their reputation if they allow the public to discuss vaccination issues at their venues. Hence the need to keep the venues secret until the day of the event.
4. The University of Wollongong (UOW) breaching its charter to present integrity in academic knowledge by promoting the government's claims about vaccine safety and efficacy on its website *one week after my PhD thesis* was finished and published on the UOW website in 2016. This is a breach of integrity because the UOW academics who have signed their names to this statement have never researched vaccination science in-depth or had any publications on this topic.
5. The UOW is deceiving the Australian public with this promotion of the government's false claims about vaccination that is supported by the signature of Professor's Heather Yeatman and Alison Jones, who have no professional expertise in the area of vaccination science or policy.

These strategies are designed to confuse the public about the science of vaccination and they have resulted in doctors and parents being **prevented from discussing the medical risks of vaccination in public venues and in the mainstream media in Australia** - a situation that is dangerous to public health.

Australian journalists are being allowed to provide their unqualified opinion to the public that **all vaccines** are good for you. This is being based on **false information** due to [institutional biases](#) in the political system.

The Medical Board of Australia (MBA) is describing the risks of vaccines as 'anti-vaccination material' and there has been no scrutiny of the science that the MBA is describing as 'anti-vaccination'. The MBA is not being held to account **by any public authority**. This is enabling the MBA to choose the 'accepted literature' on vaccination safety and efficacy.

The public has a right to know that the only research on vaccine safety and efficacy that is 'accepted' by the MBA and the Australian government is funded, performed and promoted to doctors and the public, by the pharmaceutical companies. That is, the companies that are profiting from our health.

The control of infectious diseases in Australia was achieved by [1950-60 without the use of the 16 vaccines](#) that the Australian government has mandated **with financial coercion** into Social Welfare policies. The Australian government is deceiving the public about the necessity for these 16 vaccines and this is a crime against the Australian public.

The Australian government has removed choice in the use of 16 vaccines for new parents for welfare payments, for the use of childcare centres, for immigrants and for university students choosing a career in the health profession.

Even though there is no Australian adult that has used all, **or even most**, of the 16 vaccines that are now mandated for welfare benefits, childcare centres, immigrants and university students, the Medical Board of Australia is claiming that " a 95% uptake rate of all 16 vaccines is essential" to control these infectious diseases in the Australian population. This is an oxymoron.

None of the 16 vaccines have ever been used with a 95% uptake rate in the Australian population to control any infectious disease and the MBA has not provided any evidence to support this claim. Most of the vaccines have been added to the recommended schedule after 1990 when no infectious disease was a serious threat to the majority of Australians.

Many of the mandated vaccines - **chicken pox vaccine, rotovirus vaccine (for gastroenteritis), meningococcal and pneumococcal vaccines** - were only added to the schedule in **2013** and **mandated with coercion in government policies** in **2015** when **Scott Morrison** was the Minister for Social Services (**for implementation in January 2016**).

These vaccines have never been used in any population with a 95% uptake rate to control any infectious disease and the Australian government has committed **a crime** with this legislation.

This is a crime because it breaches the Nuremberg Code that requires fully informed consent with truthful knowledge about vaccines and their ingredients and serious adverse events, being provided to the individual, with an assessment of the individual's own particular genetics and circumstances, **before consent** to the procedure is provided.

Doctors and nurses in Australia are currently being forced to breach the **Geneva Convention** - the right for patients to have fully informed consent without financial or other coercion to vaccination - by an MBA that is threatening them with **de-registration if they present 'anti-**

vaccination' material. Many Australian health practitioners are currently being investigated for their integrity in presenting the risks of vaccination to their healthy patients.

The government is also falsely claiming that 'vaccines do not cause autism' and the evidence for this fact is provided in my [University of Wollongong PhD thesis](#).

As with all drugs, the risks of vaccines are being downplayed, and even ignored, by the pharmaceutical companies who are informing the government about vaccination policies through powerful industry-lobby groups such as **SAVN / the Australian Skeptics Inc and the Friends of Science in Medicine. These lobby groups are also being supported by the Public Health Association of Australia (PHAA) and the Conversation website.** This influence is occurring through funding arrangements, donations and honoraria provided to representatives on government vaccine advisory boards.

Here is a link to our seminar on the [Censorship of the Vaccination Debate](#) in Australia held in Sydney on 27 April 2018. Please forward this newsletter to family and friends to ensure they can investigate these issues and protect their health from harmful government vaccination policies.

Judy Wilyman PhD

Bachelor of Science, University of NSW

Diploma of Education (Science), University of Wollongong

Master of Science (Population Health), Faculty of Health Sciences, University of Wollongong.

PhD in [The Science and Politics of the Australian Government's Vaccination Program](#), UOW School of Humanities and Social Inquiry.

Some of the Ingredients in Vaccines:

Please consider whether you want these substances injected into the tissues of your new born infant before the blood brain barrier is developed at 6 months of age or their other body systems. These ingredients and more are present in vaccines and the vaccination schedule has expanded to 16 vaccines requiring 52 doses from birth to adolescence.

Supporting Public Interest Research

I would like to thank everyone who has supported my research and newsletters over the last 5-10 years. If you have appreciated this unfunded research and debate of children's health I hope you will consider a [\\$5 donation](#) for the upkeep of my website and continuation of my voluntary newsletters.

Only funded research is promoted to the

And the '**new norm**' - allergies, anaphylaxis, Chronic Fatigue Syndrome (CFS), autoimmune disorders (diabetes, childhood rheumatoid arthritis, arthritis, multiple sclerosis etc.) autism, speech delay, neurological disorders, ADHD, childhood cancers.

public and universities do not promote student research. Hence the need for my website and newsletters to promote my independent research that is in the public interest.

My website [Vaccination Decisions](#) became necessary because the University of Wollongong [is not required to rectify the academic record when organised industry-lobby groups](#) provide false information about my university research in the mainstream media.
