

Newsletter 199 The Sydney Morning Herald Providing False and Misleading Information about Flu Vaccines

25 May 2018

Here is an 11 min video of the science that is not provided to doctors in their education on the ingredients of vaccines. This is significant because the promotion of more and more vaccines is harming human health and genetics, and doctors take an oath under the Declaration of Geneva to put the patient's health and well being first. Dismissing this science as 'anti-vaccination' is a violation of the principles of good medical practice. The video is titled "[How I shut up My Doctor about Vaccines](#)" and it describes the mechanism by which the chemicals in vaccines can cause chronic illness in the population. Your doctor is not being provided with the ingredients of vaccines in their education and journalists are also hiding this information from the public.

The Sydney Morning Herald (SMH) is currently providing a video to its readers on the [Ingredients of Influenza Vaccine](#) that provides false or misleading claims about these vaccines. Here are four of the misleading claims it provides about flu vaccines:

1. "Our main line of defence against flu is the flu vaccine"
2. "It's a cocktail of multiple inactive viruses that kick-start the body's immune response, just like the real thing".
3. "Flu vaccines are usually about 50-60% effective".
4. "The World Health Organisation continually monitors flu around the world"

Here is the information that the SMH should have provided to the public:

1. Our main line of defence against all infectious diseases is the body's first and second line of defence. This includes the physical and chemical barriers that prevent pathogens from entering the body; skin, tears, mucous, cilia, stomach acid, urine flow, good bacteria and white blood cells called Neutrophils. The second line of defence is the immune response that involves specialised cells attacking the pathogen. This is much more complex than the simple antibody response that is artificially induced by a vaccine and nothing like the real thing. Our first line of defence is clearly not the flu vaccines because up until recent years most people were not getting a flu vaccine and most people were not, and are not, at serious risk from the flu.

2. According to the [Australian government's](#) poorly presented [list of ingredients](#) for flu vaccine it contains - 3 (sometimes 4) strains of inactivated flu virus, [formaldehyde](#), [polysorbate 80](#), [antibiotics \(gentamicin, kanamycin, neomycin, polymixin, egg protein, and the mercury compound - thimerosal](#) - in some multi-dose vials of flu vaccines. These are not mentioned in the SMH video and many people are allergic to these ingredients resulting in anaphylactic shock in extreme cases. Mercury is also a neurotoxin that has not been removed from all vaccines since 2000, as the government has claimed, and it can cause brain damage leading to dementia / Parkinson's disease - an increasing problem in the population.

3. According to the research performed by the pharmaceutical companies these vaccines are only 50% effective, that is, the same risk as not having the vaccine at all.

4. The SMH should clarify that it is an advisory group to the WHO that continually monitors flu around the world and this is the Global Alliance for Vaccines and Immunisation (GAVI). This alliance which recommends flu strains and vaccines to the WHO is made up of the Federation of Pharmaceutical Companies, the Bill and Melinda Gates Foundation, the Rockefeller Foundation, Biomedical companies, the World Bank and the International Monetary Fund and many others. Many of these organisations profit from vaccines and they all have influence in the recommendations that the WHO provides to its member countries.

So whilst the WHO is chartered with providing objective science it is the front organisation for the GAVI alliance (a corporate alliance) that provides the recommendations for vaccines to the WHO. There is no independent assessment of these recommendations for objectivity in the statistics or the science that is used.

[Epigenetics](#) is the study of illnesses caused by chemicals, foreign protein and stress on human genes, and the triggers for these pre-disposed diseases, are all found in vaccines.

Did you know that the Medical Board of Australia (MBA) and the Australian government have ignored these facts about vaccines in their claim that humans can use unlimited vaccines in infant and adult bodies? Yes this fact is true. They have also ignored the fact that these chemicals are injected into the body bypassing the bodies first line of defence and can travel to every organ of the body. This is in contrast to natural exposure to these viruses / bacteria / chemicals that pass through the respiratory or digestive system encountering the first line of defence.

This means that the a flu vaccine, like other vaccines, injects these foreign inactivated pathogens plus chemicals (that many people are allergic to) directly into the tissues of our bodies and [can trigger human genes](#) that result in chronic illnesses (pre-disposition to disease). For example, the autoimmune diseases that are escalating in the population.

Here is an 11 min video of this science - [How I shut up My Doctor about Vaccines](#) - and the mechanism by which chronic illness is increasing in the population due to vaccines - that your doctor is not being informed about in their education on vaccines.

Currently, the Australian government is running a multi-million dollar tax payer funded indoctrination campaign on vaccines. Whilst the government is presenting this as an 'education' campaign it is not education when the government [censors university research on vaccinations](#) and the Medical Board of Australia (MBA) dismisses this science as "anti-vaccination". (Also refer to [Newsletter 198](#)).

Who is looking after the public interest in government vaccination policies when the MBA, the government and journalists are permitted to misinform the public about the ingredients of vaccines and to dismiss the risks of a medical intervention as 'anti-vaccination'? It is up to the public to take a stand on this issue before another generation is lost to an ever expanding vaccination program.

Judy Wilyman PhD

Bachelor of Science, University of NSW

Diploma of Education (Science), University of Wollongong

Master of Science (Population Health), Faculty of Health Sciences, University of Wollongong.

PhD in [The Science and Politics of the Australian Government's Vaccination Program](#), UOW School of Humanities and Social Inquiry.

Some of the Ingredients in Vaccines:

Please consider whether you want these substances injected into the tissues of your new born infant before the blood brain barrier is developed at 6 months of age or their other body systems. These ingredients and more are present in vaccines and the vaccination schedule has expanded to 16 vaccines requiring 52 doses from birth to adolescence.

And the '**new norm**' - allergies, anaphylaxis, Chronic Fatigue Syndrome (CFS), autoimmune disorders (diabetes, childhood rheumatoid arthritis, arthritis, multiple sclerosis etc.) autism, speech delay, neurological disorders, ADHD, childhood cancers.

Supporting Public Interest Research

I would like to thank everyone who has supported my research and newsletters over the last 5-10 years. If you have appreciated this unfunded research and debate of children's health I hope you will consider a [\\$5 donation](#) for the upkeep of my website and continuation of my voluntary newsletters.

Only funded research is promoted to the public and universities do not promote student research. Hence the need for my website and newsletters to promote my independent research that is in the public interest.

My website [Vaccination Decisions](#) became necessary because the University of Wollongong [is not required to rectify the academic record to the public when organised industry-lobby groups](#) provide false information about my university research in the mainstream media.
