

## Newsletter 201 WA Health Minister, Roger Cook, Supports Censoring Scientific Debate on Vaccines

22 June 2018

WA Health Minister, Roger Cook, has condoned the removal of a billboard that simply asks "Do you know what is in a vaccine?"

Politicians are liable for participating in legislative decisions that use false information to harm human health. The current censorship of the risks of vaccines as "anti-vaccination" and the suppression of public discussion is resulting in an escalation of chronic illness in the population that is entirely preventable.

In Perth CBD a billboard was put up on the 13 June 2018 (corner of William and Brisbane St) that asked "Do you know what is in a vaccine". This question is essential for assessing the risks of this medical procedure. Just as you would check the ingredients of your food except that vaccines are injected into the tissues of the human body and this means the chemicals can access every organ of the body.

This information is in the public interest yet the WA government and AMA are calling this '[anti-vaccination material](#)' and complaining that "the question poses a public health risk".

Why is the Australian Medical Association making this unscientific claim? The risks of any environmental toxin need to be addressed within the individual genetic make-up of each person - and there are many toxins in vaccines. Each toxin in the vaccine, for example, aluminium and antibiotics, will have a different reaction in every person because of their genetics - and this reaction can be delayed.

Does Health Minister, **Roger Cook**, know that there are antibiotics in every vaccine and that antibiotics are linked to causing many chronic illnesses - including autism?

Why has the AMA also ignored the fundamental medical principle that:

18/03/2021

"A medical treatment should be individualised particularly when injecting substances into the human body that carry the potential for disease, disablement and death".

The US Vaccine Injury Compensation Scheme has paid out over [\\$4 billion to vaccine victims](#) and vaccines are described by the US government as being "unavoidably unsafe". This statistic is believed to represent only 10% of those that are injured by vaccines.

It is "quack" science for the AMA to state that asking what is in a vaccine is a "public health risk" and yet the AMA has asked the WA Health Minister, Roger Cook, to ban the billboard using the state regulator's legislation that prohibits the advertising of "any public health risk activity".

The billboard was removed yesterday (21 June 2018) after one week of a four week contract.

Did you know that [antibiotics, aluminium, formaldehyde, polysorbate 80, phenoxyethanol etc \(plus many more ingredients\)](#) are injected into the tissues of every newborn baby and adult with every vaccine? Most parents do not know this and doctors are not educated about the ingredients of vaccines.

Did you know that these ingredients, specifically antibiotics and aluminium are linked to causing autoimmune diseases that do not develop immediately after you get the vaccine? There is a delayed reaction that can be months or years after you get the vaccine before the disease develops. This includes autoimmune and neurological disorders including allergies, anaphylaxis, thyroidism, diabetes, arthritis, multiple sclerosis, chronic fatigue syndrome, Guillane Barre Syndrome and many more chronic illnesses.

The Health Minister, Roger Cook, can be held liable for dismissing this science as "[dangerous misinformation](#)" and for claiming this question is "a public health risk" - when the opposite is true.

The AMA and politicians are using [derogatory language](#) to describe the simple question "Do you know what is in a vaccine?" when this is essential knowledge for your health.

Please ask yourself why the WA government is condoning the banning of a discussion of this science by academics and health experts? This is a loss of freedom of speech in Australia (and medical rights), a democratic country. Also ask why medical practitioners are suggesting that this information is not fundamental to improving public health?

All Australian citizens need to take a stand to make the WA Health Minister, Roger Cook, accountable for allowing the censorship of this billboard that is in the public interest - and his vaccination policies that will harm human health.

A conference is being held in Sydney on Saturday June 30th that is titled "[The Censorship of the Vaccination Debate in Australia](#)". At this conference academics and citizens will present the scientific evidence and arguments that are being dismissed and suppressed by the Australian government as "anti-vaccination material". [Tickets can be bought on this link](#)

Please forward this email to your family and friends and challenge the government before further legislation is enacted to remove the public interest from vaccination policies.

Governments are ignoring the genetics of the population with the implementation of the **No Jab No Pay/Play** policies and the science needs to be publicly debated and scrutinised - not

suppressed by oppressive government legislation based on false information.

*Master of Science (Population Health), Faculty of Health Sciences, University of Wollongong.*

*PhD in [The Science and Politics of the Australian Government's Vaccination Program](#), UOW*

*School of Humanities and Social Inquiry.*

## **Censorship of the HPV Vaccine (Gardasil and Cervarix for Cervical Cancer) in Australia**

Did you know that Japan has [removed the HPV vaccine](#) that is promoted to prevent cervical cancer from its recommended schedule of vaccines because of the damage it is causing in the population? Yet this debate has been censored in Australia.

In 2013 I had [two papers published](#) on the dangers and lack of proven efficacy of HPV vaccines in preventing cervical cancer. My research was also presented at two international cancer conferences - San Francisco and London. Instead of [reporting](#) on these global concerns in the Australian media journalists presented false information about [my research](#) to the public.

A pharmacist has now presented my research in a short 23 min video that describes the fast tracking of this vaccine and the creation of a market for this vaccine by the pharmaceutical companies. The video is titled "[Gardasil / Cervarix HPV Vaccination - to Jab or not to Jab](#)".

## **Supporting Public Interest Research**

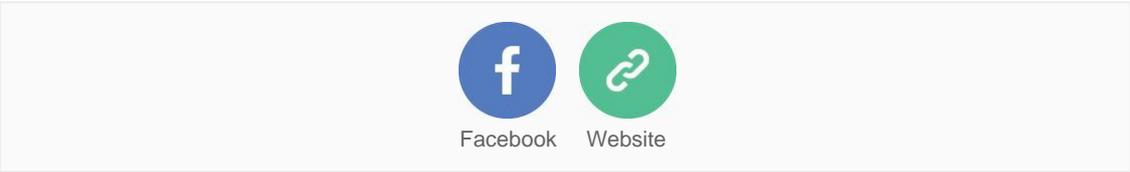

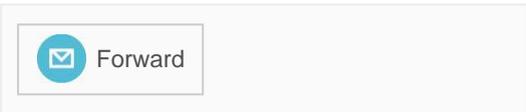

I would like to thank everyone who has supported my research and newsletters over the last 5-10 years. If you have appreciated this unfunded independent research and debate of children's health I hope you will consider a [\\$5 donation](#) for the upkeep of my website and continuation of my voluntary newsletters.

Only funded research is promoted to the public and universities do not promote student research. Hence the need for my website and newsletters to promote my independent research that is in the public interest.

My website [Vaccination Decisions](#) became necessary because the University of Wollongong [is not required to rectify the academic record to the public when organised industry-lobby groups](#) provide false information about my university research in the mainstream media.

**In Australia we have a self-regulated vaccine industry.** That is, the fox is in charge of the hen house. The Australian government regulator is the **Therapeutic Goods Administrator** (TGA) and it is 100% funded by the pharmaceutical companies that make the vaccines and profit from approving vaccines in the population.

The TGA is also responsible for monitoring the safety and efficacy of vaccines in the population but profits would decline if the TGA used an active surveillance system that could prove the harm that vaccines are causing. Active monitoring systems can make causal links to adverse health outcomes from vaccines (and are easily set up) but the TGA hasn't bothered to use this type of monitoring system in the 70 years of mass vaccination programs - and no-one is making them accountable.
