

## Newsletter 210 The Fallacy of Doctors being 'Experts' in Infectious Disease Control

12 September 2018

In the 21st century the control of infectious diseases is being promoted to the community by “medical doctors” when throughout history this area of health was not included in traditional medicine. This is because infectious diseases were always considered a public health issue and controlled in the field of [Social Medicine](#): the field of ‘medicine’ that uses **political and economic** decisions to make changes to the environment and lifestyle of communities to improve public health.

Public health was incorporated into the field of medicine in the 1990’s in Australia but doctors are not being educated on the epidemiology of infectious diseases. That is, the importance of environmental and lifestyle characteristics in the control of infectious diseases. They are only educated on the necessity to use every vaccine that is recommended by the government.

Doctors are also not educated on the [serious side-effects](#) that have been associated with vaccines for decades or the contraindications of vaccines that were used prior to the introduction of the [US Vaccine Injury Compensation Act in 1986](#) that removed all liability for harm from the vaccine manufacturers.

So why is there such a disparity between the medical literature on infectious diseases presented by independent researchers to that provided by medical practitioners and the government?

This is because the pharmaceutical companies are influencing every aspect of the [development, marketing and promotion of vaccines to medical doctors and politicians](#) (Stamatakis 2013).

Doctors are not providing objective evidence on the control of infectious diseases and they are incorrectly stating that the public must get their advice on infectious diseases from doctors.

My university research has been completed in the [field of Social Medicine](#) at the University of Wollongong and [powerful lobby groups](#) have spread false and misleading information about my PhD research in the mainstream media and on social media in an attempt to remove its credibility from public debate.

[My PhD thesis](#) provides evidence that current government vaccination programs are resulting in more harm than good to children's health and to the fabric of Australian society. Children's health has significantly declined as the vaccination program has expanded since the 1990's and thousands of parents are now long-term carers for children **who will never reach their potential in life.**

Further, the Australian government is falsely claiming there is a consensus on the science of vaccination by creating an 'appearance of a consensus' through the criteria for medical registration. The [Health Practitioner Regulation National Law Act](#) states that health professionals cannot promote "anti-vaccination material" or they will be de-registered from the profession – this is a label (anti-vaccination) that is being used to dismiss the risks of vaccines that have been associated with vaccines for decades.

This has removed the autonomy for doctors / health professionals in Australia to assess the full body of medical literature which means they are no longer serving the best interests of their patients but the best interests of the state – the government. This is a breach of the medical code of conduct by Australian doctors who are not presenting the ingredients of vaccines or the serious risks of vaccines to their patients for a fully informed choice in using this medical procedure.

In order for Australians to protect their health it is necessary to do your own research and to challenge your doctor with the medical literature that they are not providing on the control of infectious diseases or the ingredients and serious risks of vaccines.

Judy Wilyman PhD

*Bachelor of Science, University of NSW*

*Diploma of Education (Science), University of Wollongong*

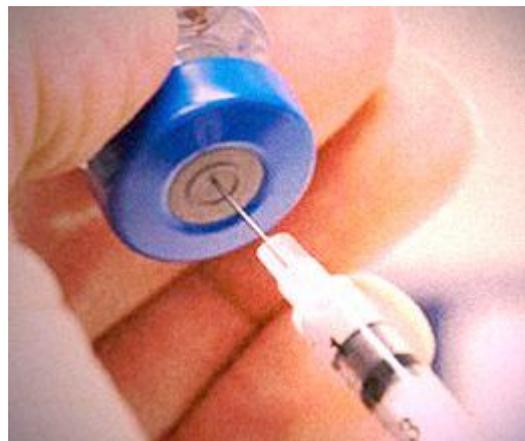

*Master of Science (Population Health), Faculty of Health Sciences, University of Wollongong.*

*PhD in [The Science and Politics of the Australian Government's Vaccination Program](#), UOW School of Humanities and Social Inquiry.*

#### **Some of the Ingredients in Vaccines:**

Did you know that antibiotics are in most vaccines? Many people are allergic to antibiotics and using any vaccine carries the serious risk of anaphylactic shock to this and

#### **Supporting Public Interest Research**

I would like to thank everyone who has supported my research and newsletters over the last 5-10 years. If you have appreciated this unfunded independent research and

many other vaccine ingredients. Are you being informed of this before you give consent to giving your newborn baby a vaccine?

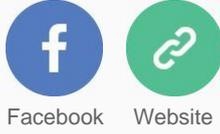

Please consider whether you want these substances injected into the tissues of your new born infant before the blood brain barrier is developed at 6 months of age or their other body systems. These ingredients and more are present in vaccines and the vaccination schedule has expanded to 16 vaccines requiring 52 doses from birth to adolescence.

And the '**new norm**' - allergies, anaphylaxis, Chronic Fatigue Syndrome (CFS), autoimmune disorders (diabetes, childhood rheumatoid arthritis, arthritis, multiple sclerosis etc.), thrombocytopenia purpura (ITP), autism, speech delay, neurological disorders, encephalopathy, meningitis, ADHD, childhood cancers, and many more.

debate of children's health I hope you will consider a [\\$5 donation](#) for the up-keep of my website and continuation of my voluntary newsletters.

Only funded research is promoted to the public and universities do not promote student research. Hence the need for my website and newsletters to promote my independent research that is in the public interest.

My website [Vaccination Decisions](#) became necessary because the University of Wollongong [is not required to rectify the academic record to the public](#) when organised lobby group activists, such as **Australian Skeptic Inc / SAVN / Friends of Science in Medicine**, and other **activists from the powerful industry-medical complex** provide false information about my university research in the mainstream media.
