

Newsletter 214 The Australian Media will not Report the Case for Vaccination Choice

16 November 2018

On the 10 November 2018 citizens in Perth held an event discussing the scientific and political reasons for our right to choice in vaccination. This event was promoted as "[Let's talk about Vaccination Choice and Vaccine Injury](#)" and a press release was provided to the media.

For the first time in a decade the Australian media did not present this as an "anti-vaccination event". This is because the media decided to ignore our community event altogether and not publicise the concerns that many Australians have about losing our right to choice in vaccination. The Australian media will only present Australian's concerns as 'anti-vaccination' or a 'conspiracy theory'.

If you believe in medical freedom in Australia and your right to choose what you inject into your own body - in the name of health, then the Australian media will not give you a voice to present the scientific and political arguments supporting your position - even if you have a MSc and a PhD in public health.

Here is the [30 min video of the presentation](#) that I gave at this event describing why vaccines have always been a voluntary medical intervention in the historical control of infectious diseases and why they must remain voluntary in genetically diverse populations.

This presentation provides evidence that vaccines are being promoted by

doctors on the myth of 'vaccine-created herd immunity'. This claim is propaganda that is now being taught in Australian schools from kindergarten to university. The presentation also shows how Australian doctors are breaching the hippocratic oath by promoting the government's vaccination policies and by ignoring the known risks of vaccines. This is because the risks are being presented by the government as "anti-vaccination material".

I have provided the evidence for these conclusions in this 30 min video by describing the politics that is allowing this to happen in Australia. You can find a more in-depth analysis of this evidence in [my PhD in public health](#) that is published on my website and on the University of Wollongong website.

Or you can watch this 30 min video that was presented at the [Vaccines and Immunisation Conference](#) in Osaka Japan (23 October 2018). This is the scientific and political information that doctors are not receiving in their education about the control of infectious diseases that is critical to human health.

The media and industry-associated lobby groups are informing the public that my PhD is in "humanities" and not public health. This is misleading. Look at the contents of my PhD - it specialises in the science, politics and ethical issues in the control of infectious diseases. I enrolled in the UOW School of Public Health in 2004 and my MSc and PhD specialise in Social Medicine (public health).

The University of Wollongong provided supervisors from the School of Humanities (Social Sciences) in 2011 to cover the politics, science and ethics involved in the decisions to use vaccines to control infectious diseases. My PhD specifically covers the epidemiology of infectious diseases in Australia and the reasons why the Australian government is choosing to mandate multiple vaccines in the childhood schedule.

In the presentation I state that doctors are not specialists in immunisation. By this I mean that they are not being educated on the epidemiology and historical control of infectious diseases, nor are they educated on all the ingredients of vaccines or the serious adverse health outcomes that have been associated with vaccines **for decades on the package inserts**. Associations need to be investigated before a product is claimed to be 'safe'.

Hence I have stated that "doctors do not have specialised knowledge in immunisation". This is a direct quote from several doctors and it is a fact that is not being revealed to the community.

Doctors are breaching their hippocratic oath **to put the patient's best interests first** because they are not providing information on the ingredients of vaccines or their known adverse health effects in the human body. This is important to health outcomes in their genetically diverse patients. These issues are explained further in this [30 min presentation](#) at the science conference in Japan and [in my PhD](#).

Please note that Sweden is one of several countries that has stated it will not mandate vaccines in discriminatory government policies because of the known health risks and also because it is against the constitution. If this policy of forced medication in healthy people is not necessary for Sweden then it is not necessary in any community.

Bachelor of Science, University of NSW

Diploma of Education (Science), University of Wollongong

Master of Science (Population Health), Faculty of Health Sciences, School of Public Health, University of Wollongong.

PhD in [The Science and Politics of the Australian Government's Vaccination Program](#), UOW School of Humanities and Social Inquiry.

Website [Vaccination Decisions](#)

Some of the Ingredients in Vaccines:

Did you know that antibiotics are in most vaccines? Many people are allergic to antibiotics and using any vaccine carries the serious risk of anaphylactic shock to this and many other vaccine ingredients. Are you being informed of this before you give consent to giving your newborn baby a vaccine?

Please consider whether you want these substances injected into the tissues of your new born infant before the blood brain barrier is developed at 6 months of age or their other body systems. These ingredients and more

Supporting Public Interest Research

I would like to thank everyone who has supported my research and newsletters over the last 5-10 years. If you have appreciated this unfunded independent research and debate of children's health I hope you will consider a [\\$5 donation](#) for the up-keep of my website and continuation of my voluntary newsletters.

Only funded research is promoted to the public and universities do not promote student research. Hence the need for my website and newsletters to promote my independent research that is in the public

are present in vaccines and the vaccination schedule has expanded to 16 vaccines requiring 52 doses from birth to adolescence.

And the '**new norm**' - allergies, anaphylaxis, Chronic Fatigue Syndrome (CFS), autoimmune disorders (diabetes, childhood rheumatoid arthritis, arthritis, multiple sclerosis etc.), thrombocytopenia purpura (ITP), autism, speech delay, neurological disorders, encephalopathy, meningitis, ADHD, childhood cancers, and many more.

interest.

My website [Vaccination Decisions](#) became necessary because the University of Wollongong [is not required to rectify the academic record to the public](#) when organised lobby group activists, such as **Australian Skeptic Inc / SAVN**, and other **activists from the powerful industry-medical complex** provide false information about my university research in the mainstream media.
