

Newsletter 216 'Anti-vax activist charges \$4000 for 'expert report' By Jane Hansen (Daily Telegraph)

3 December 2018

On the 24 November 2018 Jane Hansen from Murdoch media's Daily Telegraph wrote a false and derogatory article about my university research and work as an expert witness in court cases. This article was titled '[Anti-vax activist charges \\$4000 for 'expert report'](#)' and Ms Hansen did not give me an opportunity to respond to the unsubstantiated information that she provided in this article.

To date I have been involved in two Australian court cases involving parents who disagree about whether to vaccinate their children and **I did not charge \$4000** for an expert witness report.

Jane Hansen has framed me as an 'anti-vax activist' with a PhD degree in 'humanities'. This information is false and misleading. I am an independent academic providing expert witness reports to support the case for choice in vaccination.

Journalists, and the public, are being misinformed about the specific area of my PhD. My PhD is in the control of infectious diseases in populations - a specific area of public health that is called **Social Medicine**.

This is why the media was so important in controlling infectious diseases in the mid-1900's - *before most vaccines existed*.

Here is the correct information about my qualifications that Jane Hansen did not provide to the public and politicians about my university research and work:

- My **Master of Science Degree (Population Health)** was completed in the **UOW School of Public Health**. When I requested that I continue my research with a PhD in 2007 in the School of Public Health, the head of this school would not provide supervisors in this school. Instead she recommended that I complete this research in the **School of Social Sciences**. This area of public health is called **Social Medicine**.
- Whilst my PhD has been awarded in the **School of Humanities and Social Inquiry** my expertise is in **Social Medicine** - This field involves the epidemiology of infectious diseases. That is, the science of describing the occurrence of infectious diseases in populations and their control by political and economic decisions.

In addition, Jane Hansen has falsely claimed that my PhD argues that 'vaccination is a conspiracy' and that my PhD was awarded 'amidst harsh criticism from the scientific and medical community. This is defamatory and it is misleading the public about this important health information.

The criticism of my research in the media has been from the powerful medical-industry lobby group activists and Hansen has not informed the public that my PhD **is supported** by many scientists, doctors and public health experts.

Jane Hansen has permitted a **Friends of Science in Medicine activist**, John Dwyer, to provide a false claim about my research that openly attempts to interfere with the official legal procedures for court hearings. He is quoted as saying '*if courts allow Dr. Wilyman to be an expert witness there is something wrong with the legal system*'. John Dwyer is attempting to influence the legal process with unsubstantiated comments about my qualifications.

This is followed by Jane Hansen herself declaring that 'Dr. Wilyman's research was not credible'.

It is a very serious issue when journalists take it upon themselves to declare university research as 'not credible'. In this case Jane Hansen is providing false and misleading health information to the public that is necessary to prevent serious harm and death in human populations. The purposeful presentation of misleading health information is a serious offence.

These false statements have resulted in the health minister, Greg Hunt, incorrectly telling the public that they should listen to '*undisputed medical advice*' when doctors **are not experts in social medicine**.

This is a very sad situation in Australia where many parents are now coerced into using ~16 vaccines to use **childcare facilities** and to **receive thousands of dollars in social welfare benefits**. It is splitting families and making parents very anxious about the forced medication of **healthy people** *without public and transparent debate*.

Most adults *have never used the vaccines* that are now being required for entry into many childcare centres/welfare benefits. This is because the vaccines have only been developed in the last two decades when the diseases **were not a serious risk to the majority of the population**.

Australians are being labelled derogatively in the Murdoch/Fairfax media as 'anti-vaxxers' if they choose to question the **over-vaccination** of the population and the removal of our right to choose what we inject into our own bodies in preventative health i.e. these are mandated drugs for healthy people.

Here are the serious risks of vaccines that [doctors are not revealing to patients](#) because they are not taught this information in their [medical education](#). This education is being influenced by pharmaceutical funding and there is an industry bias in clinical and political decisions being made about the use of vaccines.

For 15 years I have researched and advocated for choice in vaccination without receiving any government funding, or any other funding, for this important health research. In order to do this I had to give up my paid position as a teacher and fund my own website to present my research in (to date) 216 voluntary newsletters. This is because the mainstream Australian media will not report on the science and politics that demonstrates:

1. The serious risks of vaccines and
2. The evidence that vaccines **do not create herd immunity** to control these diseases.

Jane Hansen's media article is defamatory and she is providing false and misleading health information to the public.

Bachelor of Science, University of NSW

Diploma of Education (Science), University of Wollongong

Master of Science (Population Health), Faculty of Health Sciences, School of Public Health, University of Wollongong.

PhD in [The Science and Politics of the Australian Government's Vaccination Program](#), UOW School of Humanities and Social Inquiry.

Website [Vaccination Decisions](#)

Some of the Ingredients in Vaccines:

Did you know that antibiotics are in most vaccines? Many people are allergic to antibiotics and using any vaccine carries the serious risk of anaphylactic shock to this and many other vaccine ingredients. Are you being informed of this before you give consent to giving your newborn baby a vaccine?

Please consider whether you want these substances injected into the tissues of your new born infant before the blood brain barrier is developed at 6 months of age or their other body systems. These ingredients and more are present in vaccines and the vaccination schedule has expanded to 16 vaccines requiring 52 doses from birth to adolescence.

And the '**new norm**' - allergies, anaphylaxis, Chronic Fatigue Syndrome (CFS), autoimmune disorders (diabetes, childhood rheumatoid arthritis, arthritis, multiple sclerosis etc.), thrombocytopenia purpura (ITP), autism, speech delay, neurological disorders, encephalopathy, meningitis, ADHD, childhood cancers, and many more.

Supporting Public Interest Research

I would like to thank everyone who has supported my research and newsletters over the last 5-10 years. If you have appreciated this unfunded independent research and debate of children's health I hope you will consider a [\\$5 donation](#) for the up-keep of my website and continuation of my voluntary newsletters.

Only funded research is promoted to the public and universities do not promote student research. Hence the need for my website and newsletters to promote my independent research that is in the public interest.

My website [Vaccination Decisions](#) became necessary because the University of Wollongong [is not required to rectify the academic record to the public](#) when organised lobby group activists, such as **Australian Skeptic Inc / SAVN**, and other **activists from the powerful industry-medical complex** provide false information about my university research in the mainstream media.
